25X1

Declassified in Part - Sanitized Copy Approved for Release 2014/06/04: CIA-RDP84B00441R000100020007-1 SECRET 1 NFIB-M-112 NOFORN IIM: Soviet Ballistic Missile Defense 2. 25X1 Mr. Casey opened consideration of this paper by noting the importance and the complexity of the subject. The IIM managed to rise above a discussion of the technical issues and presented a useful summary of the 25X1 range of differing judgments. In order to make it more useful to the policymakers, he directed that the Key Judgments be reduced from 22 to four or five pages and that this section stress the key elements which have implications for policymakers. For example, the range of conclusions as to the Soviet capability to deploy a widespread ABM system and how long it is likely to take should be stated clearly in the Key Judgments; the arguments and details should be relegated to the discussion section. The Key Judgments should highlight the implications for the United States stemming from the fact that we would have little advance knowledge of a Soviet decision to deploy an ABM system. An ABM race would put the United States at an initial disadvantage and would change perceptions of, if not the reality, of the strategic balance. These are the critical questions, and again the differences in judgments could be covered in 25X1 the discussion. Mr. Casey observed that a lot of people had done a lot of hard work on this very important subject 25X1
